

Model 60922 "Timber Ridge Plan 22" 1,588 Sq. Ft.

If your site requires front side parking you may choose this version of our popular great room plans which provides similar storage components, convenience features and spacious living to the Timber Ridge Plan 21 and the Great Expectations plan shown on the previous two pages.

We simply have moved the utility room to the front for easy access from your site built garage or carport. Also note the optional corner fireplace and media center which comes equipped with TV & phone jacks, adjustable lower shelf textured bridge with recessed lighting.

Here is another one of our great room plans designed for front door side site-built garage locations as shown in this artist's print. Also shown are optional lap siding and a 9ft dormer with wings and columns around the standard recessed entry. On this model larger garage sizes will require offset from the end wall or detached garage design.
