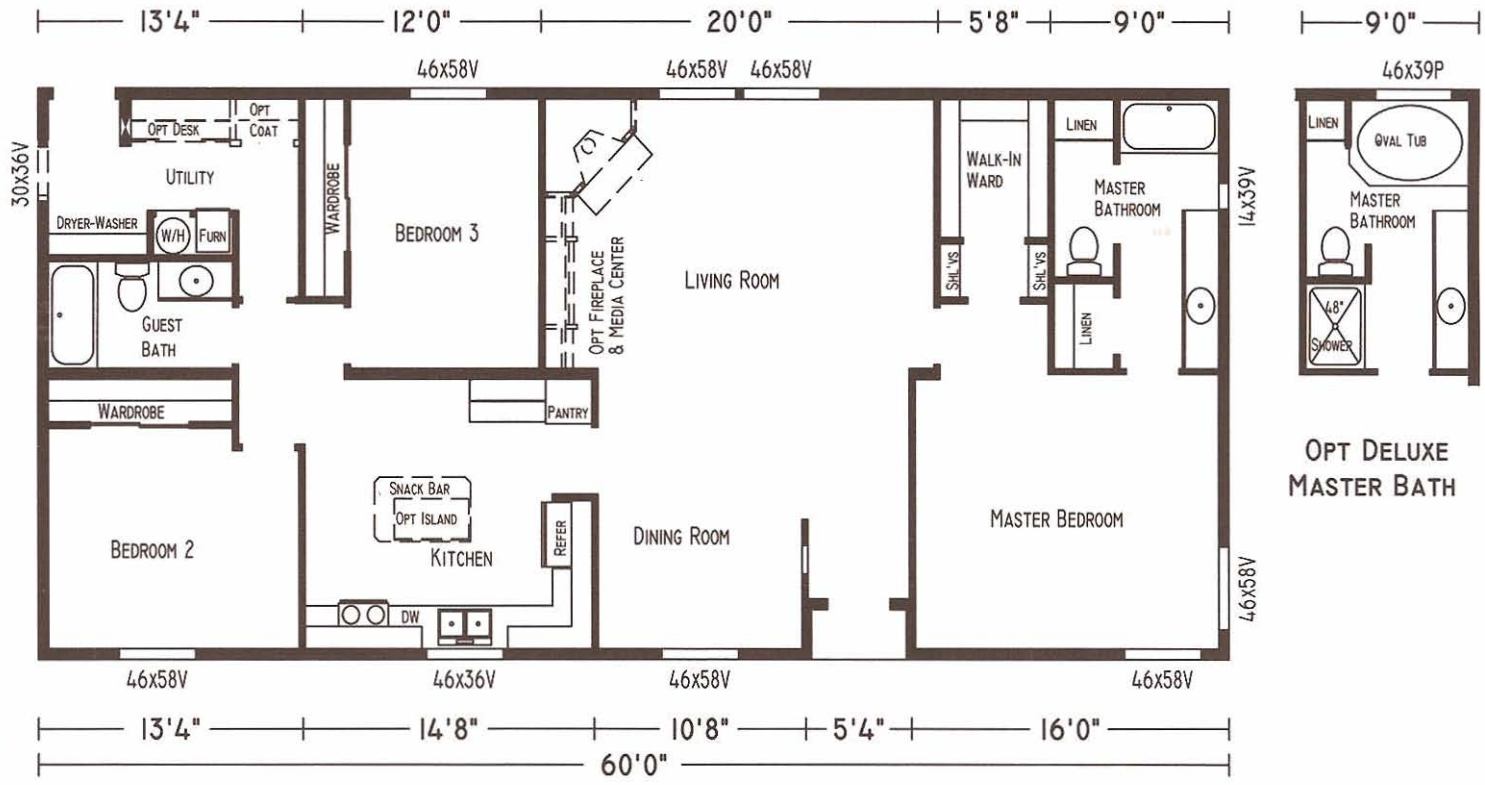
Model 60921 "Timber Ridge Plan 21" 1,588 Sq. Ft.



Here's a variation of popular great room plan from the previous page with similar features but designed for those who prefer the kitchen to be more separated from the living areas. This creates a more formal dining area while still offering an informal gathering center around the optional island bar. Note the optional fireplace and media center which fits perfectly in this plan as well as many other Aspen models with similar length living room walls.

Another of our great room plans is this Timber Ridge Plan 21 shown in our artist's print with a 9ft dormer with wings and columns around the standard recessed entry. This plan is designed for a site-built garage in the rear. For front side garage versions see Plan 22 on the opposite page.
