

'del Norte 825'

Model 40825, 1,600 Sq. Ft.

Here is the smallest of our six "del Norte" plans (Shown later in this book) specifically designed for hard-to-fit sites where lot size restrictions prevent many three-section homes from meeting setback requirements. Like its big sisters, "del Norte 825" provides wonderful storage, well placed traffic patterns and spacious room dimensions plus direct back yard access, all at a very affordable price.

The artist's print shows "del Norte 825" with optional lap siding, boxed windows, recessed entry, and a typical site-built 22'-8" wide garage facing the street on a typical 50 foot wide residential property. Check out other del Norte plans in this book for extended versions of this popular design.
