The artist's print shows our "Rio Vista" with optional lap siding, grid windows, and deluxe accents on the standard corner porch plus a typical 24 foot wide site-built garage and sidewalk facing the street. Compare this to the side yard garage location and covered porch option shown on the following Sierra Vista pages. Either variation works equally well on these and many other La Casa plans.

'Rio Vista'

Model 44827, 1,717 Sq. Ft.

We captured popular features from our larger Sierra Vista (Shown on the following pages) and put them in a plan size that more readily fits smaller sites and pocket books. Note that the corner window kitchen in these plans provide enough sidewall space for a larger than average site-built attached garage and the utility offers space for both our laundry tub cabinet and your upright freezer, while the great room and master suite provide exceptional rear facing views.
